

## Contribution to LEED Credits

Flo-Well products can be used in a number of categories described by LEED v3.

*Credit 6.1 Stormwater Design — Quantity Control (1 credit):* Limit disruption of natural water hydrology by reducing impervious cover, increasing on-site infiltration, reducing or eliminating pollution from stormwater runoff, and eliminating contaminants.

Product application (case 1):

- Flo-Well can be utilized as part of a stormwater management plan as it reduces impervious cover, increases on-site infiltration, and reduces pollution from stormwater runoff.

*Credit 6.2 Stormwater Design — Quality Control (1 credit):* To limit disruption and pollution of natural water flows by managing stormwater runoff.

Product application:

- Flo-Well can be utilized as part of a stormwater management plan. By collecting surface water and allowing it to filter through the subsurface, on-site infiltration is increased and pollution and disruption to natural waters by stormwater runoff is reduced.
